3 Lower leg length

The lower leg length determines the footrest position and the seat height of the wheelchair. The seat height determines the wheel size and with that the total height of the wheelchair.

Please fill in the measured lower leg length:

Lower leg length: cm

Please check the desired seat height and footrest position, measured from the seat upholstery (without the seat cushion).

Rear wheel position

Select the appropriate setting for the rear wheels. The shorter the wheelbase is, the more active the wheelchair becomes and the risk of tipping is greater. Anti-tip aids are recommended in that case.

Normally the wheels are positioned according to the frame size.
