

NF-Walker XR5

New

The NF-Walker XR5 is a dynamic, customisable assistive device that contributes to improved social inclusion and participation by facilitating hands-free independent standing and walking.

The NF-Walker XR5 not only promotes participation in everyday life, but stimulates increased physical activity. Research shows that physical activity reduces the risk of adverse health effects associated with sedentary behaviour.

In addition, the user's movements are performed in an upright, weight-bearing position, with adequate correction and support, preventing secondary complications related to the individual's diagnosis.

WHAT IS NEW?

Increased comfort with improved pressure relief points and flexible upholstery for

knee • chest • pelvis

Enhanced correction of the user's posture

Approved for outdoor use

Updated design

New seat solution

The NF-Walker XR5 is individually customised to deliver the required support and correction in an upright, weight-bearing position.

It is not necessary to be able to stand and walk independently to make use of the NF-Walker XR5. This makes the NF-Walker XR5 suitable for persons with diagnoses such as cerebral palsy, Spina Bifida, head injuries and a range of other syndromes. We also offer accessories making it possible for individually adapting the NF-Walker XR5 to every single user's needs.
