

BariCell IV B

High risk prevention & intensive treatment of wounds up to grade 4.

When bedsores require intensive treatment, only the best will do. The BariCell system offers effective solutions for a wide range of needs in resident/patient management. The mattress offers multiple configurations to offer the best possible pressure redistribution. The system includes an automatic pump, with alternating, continuous low pressure, autofirm and seating function. For bariatric use, we advise the BariCell range for heavy weights from 200 to 450kg.

Activating the Autofirm Mode provides a stable support surface for nursing procedures or to facilitate transfers in or out of bed. The Lock function improves safety and audio-visual Alarm guards pressure levels of the system.

Lock function, Low pressure & Power failure alarm, Autofirm

Quick release connection of the cells

Adjustable hooks

Safety Standards

Complies with:
Regulation (EU) 2017 / 745
for medical devices

Protection against Electric shock:
Class II , type BF

Protection of Ingress of Liquids:
IP21

Mode of Operation:
Continuous
