

MagniLink Mini

Small, light-weight and powerful

The MagniLink Mini is a small, light-weight video magnifier with a combined document and distance camera that provides a stunning image quality. This combination makes it a versatile and useful vision aid in a compact format that is easy to bring anywhere.

Foldable and easy to move

MagniLink Mini is ideal for use in classrooms and workplaces where the user often needs to move the reading camera between different rooms and locations.

With a USB cable, it is easily connected to a PC or an iPad, which then displays the image from the camera.

Despite its compact size, MagniLink Mini is very powerful. Use the combined document and distance camera's 10x optical zoom to view text, images or objects in full HD quality. To switch between distance and reading mode couldn't be easier. Simply turn the camera head up, and fold out the camera lens, and the reading camera instantly becomes a distance camera.

Software for PC and iPad included

Software for using MagniLink Mini with a PC (Windows) or iPad is included. This software controls the reading camera's features, such as magnification, artificial colors and brightness, and gives the user the ability to, for example, save images, record video, process text with OCR (Text to Speech) or make individual adjustments for the best experience. Smart features that increase participation – at school, at work and at home!

AI is offered for iPad users

When using MagniLink Mini with an iPad, optional AI features are also offered, opening a new dimension of possibilities. With AI, you can ask questions about a text to streamline your task. You can also ask AI to translate or summarize the text, read handwriting, describe objects and much more.

MagniLink Mini is ideal for students

Compact format for discreet use

Even easier with AI

The AI option offers several useful functions, for example you can have a printed text translated or summarized. Scan to learn more.
