# BraillePen 12 Touch

## Bluetooth Braille keyboard with Braille display

It works right out of the box. No configuration or set up needed. Connect to your phone, netbook, PC or tablet; navigate your external device, write SMS, browse the internet, do 6-key entry into your favourite Braille translator, or simply type. Switch between 6-dot and 8-dot Braille.

You get all the functions that you need. Forget about unnecessary buttons and options. Navigation cannot be easier. Use the Joystick to navigate through your external device. Edit notes and memos with ease using revolutionary ActiveTouch cursor routing. Just slide your finger over the character you want the cursor to route to and here it is.

BraillePen 12 Touch gives you now even more independence with the Clipboard. You can jot a note or a phone number without having to be connected to an external device, store it in your BraillePen 12 Touch and later transfer it out to any edit field.

Superbly portable, amazingly affordable, with easy keyboard action and enviable battery life, BraillePen 12 Touch gives you simple two-way access to computers and portable devices alike. The superb quality of the 12-cell Braille display will always make Braille reading an exciting experience.

BraillePen 12 Touch works with many access packages including iOS VoiceOver, BrailleBack, Mobile Accessibility, MobileSpeak, Supernova, Window-Eyes and Jaws, all with both keyboard and Braille display; it allows you to control and operate Windows XP, Vista, Windows 7 and Windows 8 as a bluetooth keyboard with our BraillePen Write software.
