## Helen

### The Alarm Clock for the Deaf-Blind.

Over 100 years ago, Helen Keller earned her University degree despite being deaf-blind and facing countless adversities. Her achievements inspired us as well as millions of other people. In her honor, we named our Clock for the Deaf-Blind „Helen“. The pocket-sized device helps deaf-blind people worldwide to be more independent and tackle everyday hurdles.

- **Alarm clock and timer.**
- The time as well as all other configurations can be done effortlessly with **vibration signals**.
- Big, tactile buttons.
- External **vibration cushion** included. For those with a deep sleep.
- Speech function can be activated to communicate more easily with caregivers and teachers.
