

- If you have conductive loss, use the Direct Vibe handset. Try by placing the handset on either your temple or in front (and slightly below) your ear, to see which position works best for you.
- Placing the Direct Vibe pulsator at one of these locations will allow sound vibrations to travel from the pulsator to the speech center of your brain via bone conduction.
- To connect the Direct Vibe handset, disconnect the standard handset and then replace it with the new one.
- Compatible with the CL555 and the AMPLIPOWER40/50TM.
