

Mount'n Mover™

by BlueSky Designs

INTRODUCING THE NEXT GENERATION

As part of our ongoing innovation, we introduce the next generation in mounting, providing more options to meet unique mounting needs.

The Mount'n Mover just got even better with these new and improved features:

- Twice the custom lock positions from 12 to 24 per joint. Provides 8 times the options for optimal positioning, 13,824 to be precise!
- Increased forward tilt of the tilt-plate to offer a slight downward positioning of device for eye gaze communicators.
- Fine tuning adjustment at the device for easier eye gaze calibration and infinite positioning.
- Quick Release Plate is easier to detach and attach - glides more smoothly onto the tilt-plate. Larger Red Lock Tab too!
- Improved ergonomic design of paddle and hoop. Less likely to break, deform or wear down.
- New Link Cube has a protected clasp, rounded corners, and three attachment options.
- Now in black! Customize with fun color accents - for a limited time only.

Moving mounting technology forward. It's what we do.
